## 1.1 Divisibility

**Theorem 1** (The division algorithm). *Given any integers  $a$  and  $b$ , with  $a > 0$ , there exist unique integers  $q$  and  $r$  such that  $b = qa + r$ ,  $0 \leq r < a$ . If  $a \nmid b$ , then  $0 < r < a$ .*

**Theorem 2.** *If  $g = (b, c)$ , then there exist integers  $x, y$  such that  $g = bx + cy$ .*

**Theorem 3.** *For any positive integer  $m$ ,  $(ma, mb) = m(a, b)$ .*

**Theorem 4.** *If  $d \mid a$  and  $d \mid b$  and  $d > 0$ , then  $(a/d, b/d) = 1/d \cdot (a, b)$ . If  $(a, b) = g$ , then  $(a/g, b/g) = 1$ .*

**Theorem 5.** *If  $(a, m) = (b, m) = 1$ , then  $(ab, m) = 1$ .*

**Theorem 6.** *For any integer  $x$ ,  $(a, b) = (b, a) = (a, -b) = (a, b + ax)$ .*

**Theorem 7.** *If  $c \mid ab$  and  $(b, c) = 1$ , then  $c \mid a$ .*

**Theorem 8.** *If  $m > 0$ ,  $[ma, mb] = m[a, b]$ . Also  $[a, b] \cdot (a, b) = |ab|$ .*

## 1.2 Congruences

**Definition 9.** Given integers  $a, b, m$  with  $m > 0$ . We say that  $a$  is congruent to  $b$  modulo  $m$  and we write  $a \equiv b \pmod{m}$  if  $m$  divides the difference  $a - b$ .

**Theorem 10.** *Congruence is an equivalence relation.*

**Theorem 11.** *If  $a \equiv b \pmod{m}$  and  $\alpha \equiv \beta \pmod{m}$ , then*

- $ax + \alpha y \equiv bx + \beta y \pmod{m}$  for all integers  $x$  and  $y$ .
- $a\alpha \equiv b\beta \pmod{m}$ .
- $a^n \equiv b^n \pmod{m}$  for every positive integer  $n$ .
- $f(a) \equiv f(b) \pmod{m}$  for every polynomial  $f$  with integer coefficients.

**Theorem 12.** *If  $c > 0$  then  $a \equiv b \pmod{m}$  if and only if  $ac \equiv bc \pmod{mc}$ .*

**Theorem 13** (Cancellation law). *If  $ac \equiv bc \pmod{m}$  and if  $d = (m, c)$ , then  $a \equiv b \pmod{m/d}$ .*

**Theorem 14.** *Assume  $a \equiv b \pmod{m}$ . If  $d \mid m$  and  $d \mid a$  then  $d \mid b$ .*

**Theorem 15.** *If  $a \equiv b \pmod{m}$  then  $(a, m) = (b, m)$ .*

**Theorem 16.** *If  $a \equiv b \pmod{m}$  and if  $0 \leq |b - a| < m$ , then  $a = b$ .*

**Theorem 17.** We have  $a \equiv b \pmod{m}$  if and only if  $a$  and  $b$  give the same remainder when divided by  $m$ .

**Theorem 18.** If  $a \equiv b \pmod{m}$  and  $a \equiv b \pmod{n}$  where  $(m, n) = 1$ , then  $a \equiv b \pmod{mn}$ .

**Theorem 19.** Assume  $(a, m) = 1$ . Then the linear congruence  $ax \equiv b \pmod{m}$  has exactly one solution.

**Theorem 20.** Assume  $(a, m) = d$ . Then the linear congruence  $ax \equiv b \pmod{m}$  has solutions if and only if  $d \mid b$ .

**Theorem 21.** Assume  $(a, m) = d$  and suppose that  $d \mid b$ . Then the linear congruence  $ax \equiv b \pmod{m}$  has exactly  $d$  solutions modulo  $m$ . These are given by  $t, t + m/d, t + 2m/d, \dots, t + (d - 1)m/d$ , where  $t$  is the solution, unique modulo  $m/d$  of the linear congruence  $ax/d \equiv b/d \pmod{m/d}$ .

**Theorem 22** (Euler-Fermat theorem). Assume  $(a, m) = 1$ . Then we have  $a^{\varphi(m)} \equiv 1 \pmod{m}$ .

**Theorem 23.** If a prime  $p$  does not divide  $a$  then  $a^{p-1} \equiv 1 \pmod{p}$ .

**Theorem 24** (Little Fermat theorem). For any integer  $a$  and any prime  $p$  we have  $a^p \equiv a \pmod{p}$ .

**Theorem 25.** If  $(a, m) = 1$  the solution (unique  $\pmod{m}$ ) of the linear congruence  $ax \equiv b \pmod{m}$  is given by  $x \equiv ba^{\varphi(m)-1} \pmod{m}$ .

**Theorem 26** (Lagrange). Give a prime  $p$ , let  $f(x) = c_0 + c_1x + \dots + c_nx^n$  be a polynomial of degree  $n$  with integers coefficients such that  $c_n \not\equiv 0 \pmod{p}$ . Then the polynomial congruence  $f(x) \equiv 0 \pmod{p}$  has at most  $n$  solutions.

**Theorem 27** (Wilson's theorem). For any prime  $p$  we have  $(p - 1)! \equiv -1 \pmod{p}$ .

**Theorem 28** (Chinese remainder theorem). Assume  $m_1, \dots, m_r$  are positive integers, relatively prime in pairs. Let  $b_1, \dots, b_r$  be arbitrary integers. Then the system of congruences  $x \equiv b_1 \pmod{m_1}, \dots, x \equiv b_r \pmod{m_r}$  has exactly one solution modulo the product  $m_1 \cdots m_r$ .

## 2 Generators

### 2.1 Python

```
1 from random import randint
2 from os import system
3 import sys
```

```
4
5 def compile_cpp(file):
6     """Compile specified file and create executable"""
7     system(f"echo_Compiling_{file}.cpp")
8     system(f"g++_{file}.cpp -o_{file}")
9
10 def generate_input():
11     """Create input for a single test case"""
12     sys.stdout = open("in", "w")

60     print("Correct")
61
62 # THEN they should coincide and
63 # the final verdict must be Accepted
64 print("Accepted")
65 clear([*files, *executables, "in"])
66
67 if __name__ == "__main__":
68     main()

```

## 3 Utils

### 3.1 Bitwise operations

```

1 Long GetBit(Long mask, Long bit) { return (mask >> bit) & 1LL; }
2 void TurnOn(Long& mask, Long bit) { mask = mask | (1LL << bit); }
3 void TurnOff(Long& mask, Long bit) { mask = mask & ~(1 << bit); }

```

### 3.2 Coordinate compression

```

1 void Compress(vector<int>& a) {
2     int n = a.size();
3     vector<pair<int, int>> pairs(n);
4     for (int i = 0; i < n; i++) pairs[i] = {a[i], i};
5     sort(pairs.begin(), pairs.end());
6     int nxt = 0;
7     for (int i = 0; i < n; i++) {
8         if (i > 0 && pairs[i - 1].first != pairs[i].first) nxt++;
9         a[pairs[i].second] = nxt;
10    }

```

```

11 }

```

### 3.3 Mersenne Twister

```

1 mt19937_64 rng(chrono::steady_clock::now().time_since_epoch().count());
2 Long GetRandom(Long l, Long r) {
3     return uniform_int_distribution<Long>(l, r)(rng);
4 }
5 vector<Long> GetPermutation(int n) {
6     vector<Long> permutation(n);
7     for (int i = 0; i < n; i++) permutation[i] = i;
8     shuffle(permutation.begin(), permutation.end(), rng);
9     return permutation;
10 }

```

### 3.4 Vim configuration

```

1 syntax on
2
3 :set tabstop=2 softtabstop=2
4 :set shiftwidth=2
5 :set expandtab
6 :set smartindent
7 :set nu
8 :set nowrap
9 :set incsearch
10 :set relativenumber
11
12 :set colorcolumn=80
13 highlight ColorColumn ctermbg=0 guibg=lightgrey

```

## 4 Templates

### 4.1 Pragmas

```

1 #pragma GCC optimize ("Ofast,unroll-loops")
2 #pragma GCC target ("sse,sse2,sse3,ssse3,sse4,popcnt,abm,mmx,avx,tune=
   native")

```

### 4.2 Template

```

1 #include <bits/stdc++.h>
2 #define debug(x) cout << #x << " = " << x << endl
3 using namespace std;

```

```
4 typedef long long Long;
5 typedef long double Double;
6 typedef unsigned long long ULong;
7 typedef pair<Long, Long> Pair;
8 typedef tuple<Long, Long, Long> Trio;
9 const int N = 1e6;
10 const Long INF = 1e18;
11 const Double EPS = 1e-9;
12 int main(void) {
13     ios::sync_with_stdio(false);
14     cin.tie(0);
15     return 0;
16 }
```
